

User Interface Designer

Design user interfaces for the UK's top brands; understanding the brand and user needs, designing the look and feel of interfaces and creating engaging and compelling digital experiences.

Skills and Experience

- Excellent visual design skills with sensitivity to user-system interaction
- Strong portfolio of user interface designs
- Experience using Sketch and InVision
- Ability to solve problems creatively and effectively
- Open to receiving objective criticism and improving upon it
- Up-to-date with the latest UI trends, techniques, and technologies
- Experience working in an agile development process
- Ability to iterate designs efficiently and intelligently
- Ability to clearly and effectively communicate design processes, ideas, and solutions to teams and clients

Responsibilities

- Create designs that contain your own design thinking that also align with the overall design roadmap and conform to fundamental design principles
- Use wireframes, prototypes, style guides and user flows to inform your interface designs
- Collaborate with clients and developers to define and implement innovative solutions for a platform's direction, visuals and experience
- Be able to present and defend your design decisions, explaining the rationale behind them
- Execute all visual design stages from concept to final hand-off to developers
- Establish and promote design guidelines, best practices and standards
- Continually keep yourself updated with the latest changes in user interface design
- Represent the company in a professional manner in client meetings and through all communication
- Ensure that experience design processes are followed and that designs are accurately versioned and maintained
- Be responsible for self-development and to participate in the personal development process
- Carry out all duties in accordance with company policies and standards
